

When Ones Make a Ten

Ten ones can trade for one ten.

1 Look at the thinking

1 Line up the places

	T	O
	¹ 7	6
+	1	6
	9	2

2 Add the ones

$$\underline{6} + \underline{6} = \underline{12} \text{ ones}$$

3 Make the trade

$$\underline{12} \text{ ones} = 1 \text{ ten and } \underline{2} \text{ ones}$$

4 Finish

$$\underline{7} + \underline{1} + 1 = \underline{9} \text{ tens}$$

$$\underline{76} + \underline{16} = \underline{92}$$

2 Talk about it

Why can't two digits stay in the ones place?

What did we trade?

Where does the carried 1 go?

Does our answer make sense?

3 Try one

a

	T	O
	1	7
+	7	3

b

	T	O
	2	8
+	6	4

c

	T	O
	2	7
+	5	9

4 Write it

a _____ = _____ tens + _____ ones

b _____ = _____ tens + _____ ones

c _____ = _____ tens + _____ ones
