

How a Caterpillar Changes

Read the short passage then answer the questions below.

A caterpillar spends its days eating and growing. Then it forms a chrysalis and grows still. When it emerges, it is a butterfly with wings. The more carefully people study creation, the more order and beauty they notice. God has written wonderful change into many living things. That is one reason nature invites both observation and praise.

1. What natural thing does the passage describe?

2. What key detail explains how it works?

3. What result or pattern does the passage show?

4. What faith idea is connected to the topic?
