

Multiplication - commutative property

multiplication, the order in which we multiply does not change the answer. Example: $2 \times 4 = 4 \times 2$ or $978 \times 323 = 323 \times 978$

Use the commutative property to fill the missing values.

1) $\underline{\quad} \times 3 = 3 \times 73$

2) $\underline{\quad} \times 5 = 5 \times 8$

3) $\underline{\quad} \times 5 = 5 \times 6$

4) $3 \times \underline{\quad} = 9 \times 3$

5) $6 \times \underline{\quad} = 2 \times 6$

6) $6 \times 82 = \underline{\quad} \times 6$

7) $6 \times 14 = 14 \times \underline{\quad}$

8) $2 \times 88 = \underline{\quad} \times 2$

9) $2 \times \underline{\quad} = 5 \times 2$

10) $\underline{\quad} \times 57 = 57 \times 7$

11) $73 \times 2 = 2 \times \underline{\quad}$

12) $3 \times \underline{\quad} = 66 \times 3$

Does the commutative property apply to addition questions?
Answer and show an example.
