

### Multiplication and division word problems

A printing company has 6 printing machines.

1. Each printing machine costs \$4,500. How much did the company pay for the machines?
2. All 6 printing machines together can print 222 pages in a minute. How many pages can each machine print per hour?
3. If a new order involved printing 3,800 pages but one of the machines is out of order, how many pages does each working machine print for this order if they each print the same number of pages?
